## Stretch Out

A few precautions can prevent future pain

Kelli Crosby

You brush your teeth daily because you don't want cavities or gum disease, right? Well, what do you do on a daily basis to prevent tension in your neck? Brushing your teeth offers you preventive dental care, but what if you could learn to be preventive with the rest of your body?

We all have bad daily habits we don't even notice until something starts to hurt. These bad habits are the root cause of many painful conditions. To help prevent pain, however, we can turn these bad habits into good habits that can be worked into our daily routine. Here is some general advice that can apply to almost every part of daily living.

### Sit Up Straight.

Sit in a chair with your hands on your hips. Slouch. Feel how your hips roll back (if you're wearing jeans, you'll be sitting on your pockets). Now sit up straight by moving your pelvis forward and centering your weight over your pelvis and off your buttocks.

### Sleep on Your Back or Side.

Sleeping on your stomach makes you twist your neck and body in order to breathe. This twisted position is terrible for your spine, especially for prolonged periods during sleep. Check your pillow and make sure it has a thickness that will support your neck in a position neutral to the rest of your spine. Try a

*"Whoever is happy will make others happy too."*

-Mark Twain

Even just a few minutes at work can help turn bad habits into good ones.

### Don't Slouch.

Slouching puts strain on your neck and can give you a headache. Your head weighs roughly 10 pounds-about as much as a bowling ball. Your spine is designed to balance that bowling ball when you're in an upright posture. If you slouch, your muscles have to do more work to hold your head up, which makes your muscles tight and angry.

memory-foam contour pillow, especially if you are a side sleeper.

### Bend with a Straight Spine.

Bending over with a curved back puts pressure on your disc material and strains the spine. The pressure created during incorrect bending can cause the

discs to bulge and put pressure on spinal nerves. Your back was not made to lower and raise your body—that's what your buttocks, hips, and knees are for.

Stand with your knees shoulder-width apart and pretend you are going to lift a 50-pound box off the floor. If you are bending your knees and hips and using your legs to lower and raise your body weight, you are lifting correctly. Now, use the same technique to pick your shoes up off the floor. Think about a squatting movement when you need to lean forward, too—such as while washing your face in the sink. Let your hips and knees do the work.

### Take Regular Stretch Breaks.

The muscles in your arms and hands get tight when you grip or pull. The muscles in your neck and shoulders get tight when you reach forward or away from your body. Give these muscles a break with a simple stretch.

It only takes 10 seconds to lengthen the tight tissue, which will take pressure off your joints and prevent chronic conditions like tendinitis and bursitis. Watch for opportunities to work in a brief stretch.

### Undo Yourself.

Evaluate the position of your body during your daily activities and make sure you "undo" that position during the day. There is no way to teach a stretch for every single activity you do, but if you take the time to reverse the position of the joint and stretch in the opposite direction, you will lengthen tight tissue and reduce repetitive strain on joints.

## Tips to Save Your Body

Replacing bad habits with good ones takes time and thought, but the effort is well worth it. Here are some helpful tips to keep you on track.

-- If you keep waking up on your stomach, wear a pair of gym shorts to bed and put a golf ball in each pocket. When you roll onto your stomach, the golf balls will wake you up and you can return to your back or side.

-- When unloading the dishwasher and getting laundry out of the machine, pose

like a tennis player waiting for a serve. The knees are over your toes (but not beyond the toes), buttocks are backward, and shoulders are forward.

-- Don't try to carve out 30 minutes daily for a stretching routine. If you stretch regularly throughout the day, you will be more effective at keeping tissue loose. Remember, it only takes 10 seconds to stretch a muscle—so find those seconds during your day and make the most of them.

-- Think about stretching the same way you think about hydration. Don't wait until you're thirsty to drink water; by then you're already dehydrated. If you wait until something hurts before you stretch, you could develop chronic tension that can lead to everything from a headache to tendinitis.

A daily stretching routine will help

prevent future issues and address current ones. Don't wait until it's a problem. Start stretching today and, little by little, your body will thank you.

Stretching for 10 seconds can take pressure off your joints and help relieve pain.

# What to Expect When Expecting

## How Massage Benefits the Expectant Mother

From fatigue to back pain, pregnancy places many demands on a woman's body. Massage is one way the expectant mother can help ease the symptoms and have a more stress-free pregnancy. During the first trimester, a primary goal of massage is to provide relaxation and increase flow of the circulation systems. Stimulating the blood system pumps more energy-giving oxygen and nutrients into your cells and increases blood flow to the placenta. Muscle tension can slow down lymph flow, leaving you fatigued. By stimulating this system, massage can boost your immunity and energy level.

In the second trimester, "the mother starts going through more changes," says Lynne Daize with the National Association of Pregnancy Massage Therapy, "so massage is used to relieve muscle spasms and ease structural changes." The therapist works to loosen joints and soften the connective tissues, thereby relieving backaches and leg cramps.

As pregnancy progresses, special positioning is required during massage. Up to the 24th week of pregnancy it is acceptable, according to Daize, for moms to be on their back with the right hip tilted up, taking pressure off the nerves and arteries. Pressure on the arteries in the back, she notes, will diminish blood flow and oxygen to the fetus. Another position that decreases stress on the back is side-lying, with the belly supported by a small wedge pillow.

During the final trimester, the baby begins to gain weight more rapidly, discomfort increases, and the impending due date can cause added stress and anxiety. At this stage, Daize says, the therapist focuses on trigger points to relieve pain while continuing to elicit relaxation throughout the body. Generally, during the last two weeks before mom's due date, the therapist concentrates her techniques on preparing the mother's body for delivery.

Before initiating massage, consult your obstetrician. While massage is a safe treatment, certain conditions require your physician's approval and careful monitoring by the therapist. Notify your therapist of any changes in your physical health, and consult your obstetrician about continuing the treatments should complications arise.

**Consult your obstetrician before receiving massage.**

# Massage for Seniors

## Bodywork Improves Quality of Life

Almost 35 million Americans are age 65 or older, and about 2,000 more reach this age every day. As the U.S. demographic shifts to an older population, it's important to find ways of helping our elders maintain their health and vitality. Massage for seniors is gaining importance as an alternative therapy to increase quality of life, and many massage therapists are getting special training to better serve this growing population.

### SENIORS' SPECIAL NEEDS

While similar in technique to other forms of massage, geriatric massage considers the special needs of the elderly. The specialty trained practitioner knows about positioning for greatest comfort and will often have the client rest in the same position for the entire massage. Mobility challenges

may dictate the massage be done in a bed or wheelchair. The therapist may also work both sides of the body at the same time to enhance body awareness, or only work hands and feet, if the client prefers. Sessions may be limited to 30 to 45 minutes, as older clients often do better with shorter, more frequent, massages.

The geriatric massage therapist is aware of health issues associated with aging and how to safely work with this type of client and with associated physicians. Consequently, the practitioner is able to individualize the massage service based on the client's health, mobility, and comfort level.

### BENEFITS OF GERIATRIC MASSAGE

A recent study conducted at the Weaver's Tale Retreat Center in Oregon looked

at the effects of massage for elderly clients. The results of the two-year study showed that participants experienced a decrease in breathing rate of 50 percent and an improvement in range of motion, posture, body awareness, skin color, and muscle tone. Furthermore, it is well documented that caring touch benefits emotional well-being in seniors -- a population at greater risk of suffering from depression.

Massage therapy can add to the quality of a senior's life, both physically and emotionally. Consider booking a session for someone you love, and make a difference in their life.

*"Sometime the  
cure for  
restlessness is  
rest."*

-Colleen Wainwright

#### SUMMER HOURS

Sunday: 7am-10am

Monday: 6:30pm-10pm

Tuesday: 6:30pm-10pm

Wednesday: 6:30pm-10pm

Thursday: 9:30am-10pm

Friday & Saturday: by appointment only

#### EXPECTING MOMS

I hope you enjoy the article in the newsletter and if you book an appointment with me before your due date, you will receive a \$10 discount. I have a wonderful massage cushion that allows you to lay on your belly while supporting the baby.

#### CMFC YEAR MEMBERS

Don't forget you receive a one time \$20 discount for each CMFC yearly membership purchased.

Enjoy your summer and remember to always reapply your sunscreen!

Thanks, Stephanie
